

LANCOM network solutions for healthcare facilities

Use our matchmaker to find your customized product package for secure networking in the healthcare sector in just a few seconds.

Please note that the size specifications are average values. Your system house partner will also technically assess whether the selected package is suitable for your individual case or whether adjustments are necessary. If you are faced with the choice between a smaller or larger package, we recommend choosing the larger package for the sake of scalability.

Rentable all-round network security with usage fees on a monthly or quarterly basis within a term of 3 years.

In case of deviating requirements alternative solutions can of course be established.
